

GRASSLANDS FOR WILDLIFE

WHF is a 501(c)(3) nonprofit organization working to create resilient grasslands and healthy watersheds statewide.

Our mission is to provide on-the-ground restoration, management and generational sustainability of prairie habitat for the conservation of soil, water, air and wildlife.

WELCOME

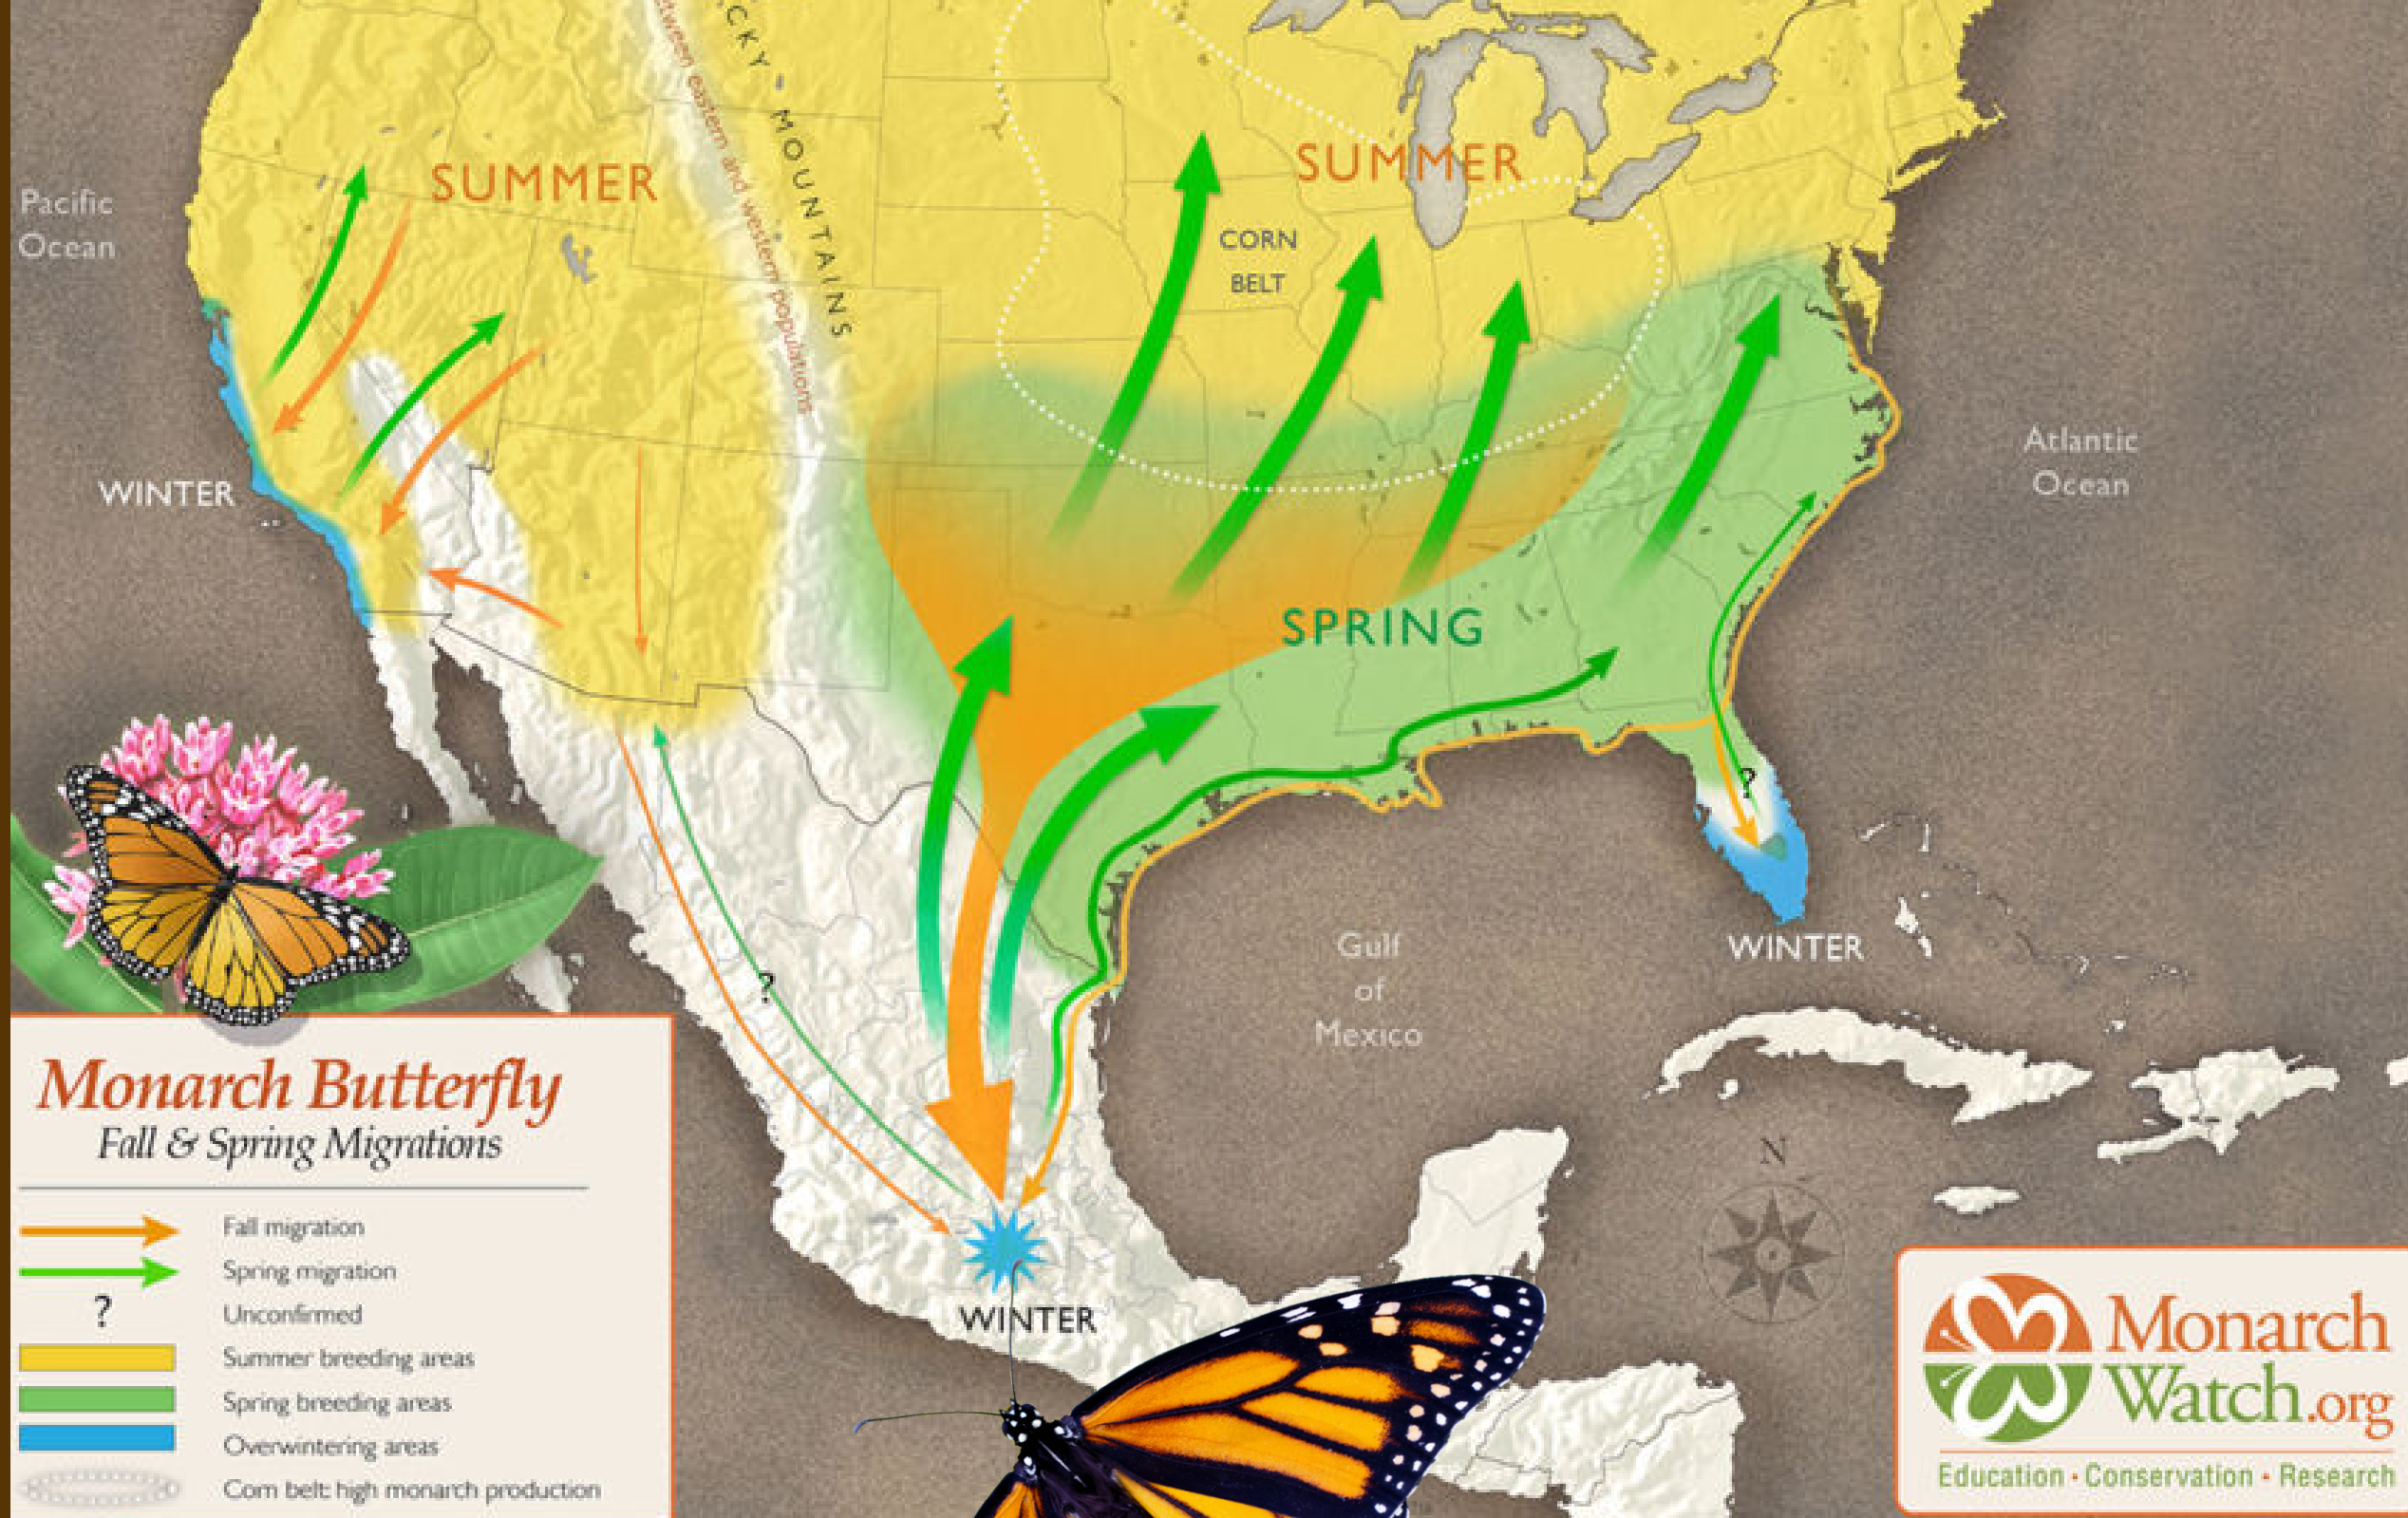

ABOUT THE MONARCH BUTTERFLY

HABITAT LOSS AND DEGRADATION

A leading cause for the declining populations of pollinator species, including the monarch butterfly (*Danaus plexippus*).

MIGRATION

Texas is a priority area for the monarch butterfly's migration routes, providing critical habitat that supports milkweed and nectar-producing plants that are necessary for the monarch's survival.

SITE ASSESSMENT

Direct technical guidance to landowners through on-site consultations. WHF will identify their property's possible land use issues, opportunities, and solutions.

HABITAT MANAGEMENT PLAN

Engaging land managers in the planning of conservation practices with the goal of providing measurable improvements of all natural resources present.

IMPLEMENTATION

Acres under improved management as a result of planned grazing, prescribed burning, invasive species control, rangeland plantings, and more.

URBAN

Pocket prairies and wildflower seedings in greenspaces amongst urban areas, as well as full prairie restoration sites.

RURAL

Prairie and grassland restoration of large acreage ranches, as well as regenerative agriculture management practices.

PAST AND ON-GOING

PROJECTS

SUSTAINING HABITAT THROUGH BEST MANAGEMENT PRACTICES

Technical assistance provided at no cost to the landowner.

Using best management practices to restore public and private lands to their highest ecological function.

- Regenerative agriculture (adaptive grazing, cover crops, use of no-till drill).
- Restoring native habitat (brush management, prescribed burns, native seeding).

Our goal is to improve our quality of life through restoring soil, water, air, plants, and wildlife.

Made possible through, NFWF ATBC, NRCS, and TCPI.
