Assessor _____ Assessor's Affiliation _____

Site Area _____ acres Date _____ Start Time _____

Monitoring Type: Baseline Post-activity

Survey Type: Random/Systematic Representative[†]

INSTRUCTIONS

Tier 3 assessments provide a qualitative rating of habitat quality and information on plant composition. Sum all points in the Total Points box to calculate a score. Note additional pollinator and management information on the back. Use the attached Plant Species Worksheets. [†]*If using this scorecard for CCAA monitoring purposes, plot locations must be randomly selected. See Section 14.2 of the CCAA for more details.*

TOTAL POINTS

Pollinators Observed

- Honey bees
- Monarch butterflies
- Beetles on flowers
- Moths
- Other
- Other bees
- Other butterflies
- Wasps on flowers
- Flies on flowers
- (describe):

Threats

- Lack of management direction, targets, or objectives
- Negative perception of habitat
- Woody encroachment
- Invasive species competition
- Habitat conversion
(e.g., actions that remove nectar plants during the growing season; habitat loss by construction, broadscale vegetation controls, or other land disturbance)
- Frequent grazing, mowing or herbicide use during the growing season
- Adjacent land use encroachment (e.g., unauthorized land uses)
- Adjacent land use impacts
(e.g., chemical drift, cropland or developed land adjacent to site without a hedgerow present)
- Other (describe):

Opportunities

- Enhancement native seeding/planting
- Adding nesting structures (e.g., brush piles, nesting structures)
- Preserving areas of dead wood or undisturbed thatch
- Use of site for public outreach or education
- Engaging volunteer partnerships in site conservation
- Other (describe):

Please use the Threats & Opportunities observed to complete the Management Module (see Users' Guide for more info).
